Research Visit to Warsaw University of Life Sciences, 6 – 8 October 2025

On 6 – 8 October 2025, our colleagues from Warsaw University of Life Sciences hosted the research teams from the University of Veterinary Medicine and Pharmacy in Košice and Mendel University in Brno.

We visited the university's livestock farm, where we collected environmental swabs and sampled milk intended for further laboratory analyses. The samples were then delivered to the university's laboratory for examination.

Our hosts organised a specialist seminar on the occasion of our visit, where the colleagues from Mendel University in Brno presented and demonstrated analytical methods used within the project.

The visit significantly contributed to the exchange of experience and expertise and strengthened collaboration among the participating institutions.

A big thank you to our hosts and everyone who made this visit a success!
