

**Research Visit to Mendel University in Brno, 3–5 February 2026**

On 3–5 February 2026, a working visit of the project team took place at Mendel University in Brno. The main aim of the meeting was the exchange of professional experience, presentation of research facilities, and coordination of further project activities.

As part of the programme, a cattle farm in Brno was visited, where samples and environmental swabs from primary production were collected for subsequent microbiological analyses.

This was followed by a visit to the Faculty of AgriSciences of Mendel University in Brno, where the partner team presented not only their laboratory facilities and technical equipment, but also their processing units and premises where animal products are handled and processed.

The visit also included a meeting with the project partners, which focused on the processing and evaluation of microbiological analysis results within the project. Discussions also addressed the organisation of transport of collected milk samples and swabs from monitored farms, their further processing, assessment of antimicrobial resistance in pathogens, and coordination of additional project tasks related to the development of the algorithmic module within the Integrated Farm System.

The visit significantly contributed to strengthening professional collaboration, exchanging expertise, and harmonising methodological approaches among the participating partners.

We would like to thank the team from MENDELU for their warm welcome and hospitality.
